Currently in Hubballi, India · Nationality: Indian · Requires UAE Visa Sponsorship · Notice: Immediate

Open to: Dubai / Abu Dhabi (On-site) · Remote UAE

Flutter · Dart · React.js · Node.js · MongoDB · Firebase · Riverpod · REST API · JWT · AES-GCM · Tailwind CSS · Groq API · OpenAI API

PROFESSIONAL SUMMARY

Flutter and full-stack MERN developer with 3+ years of production experience. Shipped two apps to Google Play under employer ownership, built a 51-endpoint role-based MERN backend, and delivered Zarf — a live B2B expense management platform purpose-built for UAE/GCC SMEs. Groq, OpenAI, and Gemini APIs integrated into production projects. Currently targeting UAE/GCC roles where mobile-first thinking and full-stack Node.js/React capability are both in play.

TECHNICAL SKILLS

Mobile: Flutter, Dart, Riverpod, Provider, GetX, GoRouter, Dio, Firebase (Auth, FCM, Firestore), local_auth, flutter_secure_storage, Drift ORM

Frontend: React.js, JavaScript ES6+, Tailwind CSS, shadcn/ui, HTML5, CSS3, Axios, React Router, Recharts

Backend: Node.js, Express.js, REST API design, JWT (access + refresh token rotation), bcryptjs, Multer, Nodemailer (Gmail SMTP)

Databases: MongoDB (Mongoose ODM), MySQL (mysql2), SQLite, Firebase Firestore

Security: AES-GCM encryption, biometric auth (local_auth), flutter_secure_storage, JWT, bcrypt, HMAC-SHA256, rate limiting, CSP/HSTS headers

Cloud & Storage: Cloudinary (secure asset storage), Firebase FCM (push notifications)

AI & APIs: Groq API (Llama 3.3 70b), OpenAI API, Gemini API — integrated in production projects

Tools: Git, GitHub Actions (CI/CD), Postman, Figma, Cursor AI, GitHub Copilot, Agile / Scrum, Play Store deployment

WORK EXPERIENCE

Independent Developer & Full-Stack Upskilling

04/2024 – Present

- Completed MERN stack development training, UI/UX design certification, and a formal full-stack internship at GIT IT Academy (Hubli). Also attended Bosch BRIDGE Industry Readiness Program (Bosch, June 2025) and Outskill Generative AI Mastermind Workshop (Aug 2025).
- Engineered **CivilEye** — full-stack complaint management on React, Node.js, MongoDB with 51 REST endpoints, 4-role JWT auth, 38 protected routes, and **Groq AI** (Llama 3.3 70b) integrated for automated complaint triage. Non-blocking fallback keeps the system at 100% availability if the AI service goes down.
- Architected **Zarf** — a B2B expense management platform for UAE/GCC SMEs: Flutter mobile app, React web dashboard, and Node.js + MongoDB API. Groq AI receipt parsing, configurable VAT-rate workflows for GCC markets, multi-currency AED conversion, and role-based access across Employee, Manager, and Admin tiers.
- Built **Raha** — a consumer app for GCC expats combining Flutter, Node.js, and **Gemini AI** for nationality-aware recommendations, with full Arabic localization and RTL layout support.
- Developed **IronVault** — offline-first Flutter password manager with AES-GCM encryption, biometric + PIN unlock, auto-lock on backgrounding, 24 screens including password health analytics, CSV import/export, and encrypted backup/restore. MIT licensed, published on GitHub.

Flutter Developer · SoftInfo Systems Pvt Ltd

08/2022 – 03/2024

Retail ERP software company — WizApp serves 600+ retail clients across India (GST-compliant inventory, POS, multi-store management) · Remote, Noida

- Shipped **TickIt to Google Play** — cross-platform task management app with smart due dates, category organisation, progress tracking, and analytics. Real-time **Firebase Firestore** sync across admin, agent, and user roles. Delivered 2 post-release update cycles responding to user feedback.
- Launched **WizApp on Google Play** — inventory management with barcode scanning, real-time stock monitoring, quantity/status threshold alerts, and 4-period sales reporting (daily/weekly/monthly/yearly). Designed REST API contracts and integrated a **Node.js + MySQL** backend across 4 API modules.
- Worked in 2-week Agile sprints; handled QA cycles, bug-fix releases, and Play Store deployment for both apps from a single Flutter codebase.

Flutter Developer · AMW Infotech

01/2021 – 05/2022

Hubli-based software consultancy, Flutter and web solutions for local businesses · On-site, Hubli

- Delivered **MPD** — a Flutter CA service management app handling centralised client request tracking, secure document storage, and daily CA office workflows. Implemented **Firebase Cloud Messaging** push notifications and real-time Firestore sync across 3 workflow stages using Provider state management.
- Shipped 3 stable production releases, working directly with Chartered Accountant professionals through the full requirements-to-delivery cycle. Translated business workflows into structured Flutter feature modules with iterative UI refinements after each release.

- Developed Flutter UI components, REST API integrations, and local SQLite storage across 4+ prototype projects under senior developer guidance.

KEY PROJECTS

Zarf — B2B Expense Management • Flutter • React • Node.js • MongoDB • Groq API • [GitHub](#) • [Live Demo](#)

- Full-stack B2B expense platform for UAE/GCC SMEs — Flutter mobile app (Riverpod, Dio, GoRouter), React web dashboard (Tailwind, shadcn/ui, Recharts), and Node.js + MongoDB API. Configurable VAT logic across GCC markets, multi-currency with live AED conversion, **Groq AI** receipt OCR, Cloudinary staging for AI receipt parsing, and Firebase push notifications on approval/rejection. Live on Vercel and Render.

Raha — Consumer Food & Services App • Flutter • Node.js • MongoDB • Gemini API • [GitHub](#)

- Consumer mobile app for GCC expats — home-cuisine food discovery and home services booking across Dubai, Jeddah, Riyadh, and Abu Dhabi. Nationality-aware onboarding feeds a **Gemini 2.0 Flash** recommendation engine, with live Google Places sync and a backend photo proxy that keeps third-party API keys off the client.
- Full Arabic localization with a true right-to-left (RTL) layout — mirrored navigation, icons, and paddings via Flutter's **Directionality** and **flutter_localizations**, not just translated strings. Backend uptime automated via a GitHub Actions keep-warm workflow.

CivilEye — Role-Based Complaint System • React • Node.js • MongoDB • JWT • Groq API • github.com/r6rizwan/CivilEye

- Full-stack complaint management platform: 51 REST endpoints, 4-role JWT auth (User / Investigator / Admin / SuperAdmin), 38 protected routes, and 10 normalised MongoDB models. Covers the complete case lifecycle — file, assign, investigate, resolve, close — with OTP verification, Multer-based evidence upload, and a full audit trail through the CaseActivity model.
- Wired in **Groq API** (Llama 3.3 70b) for AI-assisted complaint triage — automatically suggests category, priority level, and reasoning for each new submission. Implemented as a non-blocking hook on createComplaint, with a clean fallback ensuring 100% system availability if the AI service is unreachable.
- Secured across all layers: bcrypt password hashing, Multer file handling with type validation, role-specific Express middleware on every protected route, and structured error handling throughout. SuperAdmin has full oversight; each lower role has strict scope enforcement.

IronVault — Offline Password Manager • Flutter • Riverpod • Drift ORM • AES-GCM • local_auth • github.com/r6rizwan/IronVault

- Zero cloud dependency — all data stored locally in SQLite via Drift ORM, encrypted at rest with **AES-GCM**. Biometric authentication with PIN fallback, auto-lock on backgrounding, 24 screens, and MIT licensed.
- Automated build and release pipeline with **GitHub Actions CI/CD** — triggers on version tags, builds a signed release APK, and publishes it to GitHub Releases automatically.

MPD — CA Service Management App • Flutter • Dart • Firebase • Provider • AMW Infotech (Client Project)

- Flutter app for a Chartered Accountant firm — centralised client requests, secure document storage, and daily operations across a 3-stage workflow. Provider state management, Firebase Cloud Messaging, and Cloud Firestore live sync. Shipped across 3 production releases.

TickIt — Task Management App • Flutter • Dart • Firebase Firestore • [Play Store](#)

- Cross-platform Flutter task management app — smart due dates, category organisation, progress tracking, and analytics dashboard. Three-role architecture (admin, agent, user) with real-time Firebase Firestore sync across all roles.
- Deployed to Google Play Store under SoftInfo Systems. Maintained across 2 post-release update cycles addressing performance and UI improvements.

WizApp — Inventory Management App • Flutter • Dart • Node.js • MySQL • [Play Store](#)

- Flutter inventory management app with barcode scanning, real-time stock monitoring, and 4-period sales reporting (daily/weekly/monthly/yearly).
- Designed the REST API contracts and engineered the full Node.js + MySQL backend integration across 4 API modules, handling end-to-end data synchronisation between the Flutter frontend and the server. Deployed to Google Play Store — **1,000+ installs**, 4.5★ rating across 40 reviews.

CERTIFICATIONS & TRAINING

MERN Full-Stack Internship • GIT IT Academy • 11/2025 – 02/2026

MERN Stack Development • GIT IT Academy • 04/2025 – 08/2025

UI/UX Design Certification • GIT IT Academy • 08/2025 – 10/2025

Generative AI Mastermind Workshop • Outskill • 23–25 Aug 2025

Bosch BRIDGE Industry Readiness • Bosch • June 2025 (30 days)

EDUCATION

Master of Computer Applications (MCA) • KLE Institute of Technology, Hubli

Bachelor of Computer Applications (BCA) • Fatima Degree College, Hubli

LANGUAGES

English • Hindi • Kannada

Available for immediate relocation to UAE/Dubai • Open to on-site and hybrid roles
